

CIRRUS SOFT LTD is the UK based Software Consultancy that provides superior experience and expertise in Software, Web and Cloud related technologies. We will help you to design, plan and implement a scalable, reliable and cost effective solution!

We work with our clients to build the most intuitive, powerful and scalable Software solutions designed to maximise productivity and streamline business processes.

At CIRRUS SOFT LTD, we believe that we can achieve more together. Our solutions and approach is largely driven by the business benefits for our clients and we ensure that we deliver within budget and on time.

Custom Development (Software, Web & Apps)

As your business grows, it becomes difficult to perform as expected with the growing customer base. You need scalable software applications to manage critical information and stay ahead in technology trends.

A custom application can increase efficiency, achieve a healthy ROI and drive more business opportunities. We collaborate with you to understand how your business operates and what are your unique challenges and constraints.

Quite often organizations are looking at either connecting their existing application or modernising their current software applications and platforms due to their poor performance.

We then apply our deep understanding of latest technologies to create clear requirement specifications and develop scalable, agile and flexible software applications, web applications and mobile applications.

We can conduct exhaustive assessment of your existing systems and help you in:

- Finding the best integration methodologies.
- Modernizing and migrating smoothly to new technologies.

We focus our efforts on the use of following technologies:

- Microsoft Office 365, Microsoft CRM, SharePoint, Project, SAP, salesforce, WordPress, Google Apps
- App & Web Development using Microsoft .Net, PHP, HTML 5, jQuery, iOS, android.

We follow a unique approach for all the projects we undertake, we call it 'Lateralism', we involve all perspectives, sidestepping the obvious and challenging thoughts to develop creative solutions that delivers extraordinary business performances.

If you are keen on modernising your existing applications or creating entirely a new enterprise application, website or mobile application that is perfectly matched to your requirements then contact us.

In addition to custom development we can also help you with infrastructure management, software support and resource management.

 **Software Consultancy**
